HAER AZ-68-G

Photographs for HAER AZ-68-G through HAER AZ-68-CC represent a composite approach to the documentation of a series of very similar to identical residential buildings and garages. Complete exterior coverage of the best example of each type of roof pattern and floor plan was obtained. Where the integrity of the remaining identical structures was compromised by recent modifications or obscured by vegetation, sheds, or carports, only a representative portion of the building was photographed in order to illustrate its basic structure and form.
